Sonu Thomas

AI Engineer @ HCLTech | B.Sc. (Hons) Data Science & AI @ IIT
Guwahati | Generative AI • Machine Learning • Automation | AI
Solutions Architect | Full-Stack Developer
Kannur, Kerala, India

Summary

I am an AI Engineer with over 2+ years of hands-on experience in software development, web technologies, and building production-ready digital systems, combined with a strong and growing focus on Artificial Intelligence, intelligent automation, and applied AI engineering. I am currently associated with HCLTech, working within a large-scale enterprise environment that emphasizes engineering discipline, reliability, and operational excellence. My experience here has exposed me to production-grade systems, structured delivery models, cross-functional collaboration, and quality-driven software practices, all of which are critical when building scalable AI-enabled solutions. My technology journey began early during my Plus Two Computer Science education, where I worked as a Junior Web Developer at Xbean International. This early exposure allowed me to work on real client projects, understand end-to-end development lifecycles, and develop a strong problem-solving mindset that continues to shape my approach to engineering. In parallel, I have 3+ years of freelance development experience, delivering custom-built websites and digital solutions for diverse clients. This hands-on work strengthened my ability to translate abstract requirements into working software, optimize performance, ensure maintainability, and deliver user-focused solutions under real-world constraints. Over the past few years, my focus has progressively shifted toward Artificial Intelligence and AI-powered software systems. I actively upskill in areas such as machine learning fundamentals, LLM-based applications, intelligent agents, prompt engineering, and AI-assisted automation workflows. I am particularly interested in how AI can be integrated into existing software platforms to enhance decision-making, reduce manual effort, and create smarter user experiences. I approach AI not as experimentation alone, but as an engineering discipline—placing strong emphasis on system design, data flow, scalability, observability, and real-world applicability. My goal is to build AI solutions that are reliable, explainable, and

business-impact driven, rather than purely theoretical. Based in Kannur, Kerala, India | Open to Remote, Hybrid, and Global OpportunitiesI actively connect with professionals and teams working in AI engineering, applied machine learning, intelligent automation, platform engineering, and next-generation software systems, and I am always open to meaningful collaborations and challenging problem spaces.

Experience

HCLTech

3 years 4 months

AI Engineer

August 2025 - Present (1 year 2 months)

Madurai

As an AI Engineer, I design, develop, and deploy intelligent solutions that leverage machine learning, generative AI, and automation technologies to solve real-world business challenges. My work involves building AI-powered applications, developing machine learning models, integrating large language models (LLMs), and creating scalable AI workflows.

Key Responsibilities:

- Develop and deploy machine learning and deep learning models for business applications.
- Build AI-powered assistants, chatbots, and automation solutions using modern AI frameworks.
- Design and implement Retrieval-Augmented Generation (RAG) systems and agentic AI workflows.
- Work with Python and cloud-based AI services to create scalable solutions.
- Perform data preprocessing, feature engineering, model training, evaluation, and optimization.
- Integrate AI solutions with enterprise applications and APIs.
- Monitor model performance and continuously improve system accuracy and reliability.
- Collaborate with cross-functional teams to translate business requirements into AI-driven solutions.

Skills & Technologies:

Python • Machine Learning • Deep Learning • Generative AI • Large Language Models (LLMs) • Prompt Engineering • RAG • Agentic AI • LangChain • OpenAI • TensorFlow • PyTorch • Data Science • MLOps • API Development • Cloud AI Services

Supercharged Ambassador

February 2026 - Present (8 months)

Selected as a member of the Supercharged Ambassadors Club at HCLTech, representing the organization's culture, values, and employee brand.

Contributing to internal and external engagement initiatives, supporting talent attraction, and promoting meaningful conversations around innovation, growth, and career development. Actively involved in ambassador-led programs, virtual events, and community-driven initiatives to enhance employer branding and employee experience.

Key Responsibilities: • Represent HCLTech as an official Employee Brand Ambassador • Promote company culture, values, and career opportunities • Participate in ambassador programs, onboarding sessions, and engagement activities • Support employer branding initiatives across professional platforms

Software Engineer

June 2024 - Present (2 years 4 months)

Madurai, Tamil Nadu, India

I work as a Software Engineer in a large-scale enterprise environment, contributing to production-grade software systems, automation initiatives, and AI-aligned engineering workflows that support business-critical applications.

My role involves close collaboration with cross-functional teams to design, validate, and deploy changes across complex software ecosystems, ensuring system stability, performance, and compliance with enterprise standards. Through this work, I have developed a strong understanding of production systems, risk-aware engineering, and structured delivery models—key foundations for building reliable AI-enabled software.

I actively work with Java, Python, SQL, PL/SQL, Unix-based systems, and Oracle databases, supporting application logic, data workflows, and system integrations. In parallel, I leverage Git and GitHub for version control and collaborative development in structured enterprise pipelines.

Beyond core engineering responsibilities, I engage with AI and Generative AI tools to explore practical applications such as AI-assisted automation, intelligent data processing, and NLP-driven workflows. This hands-on

exposure strengthens my ability to integrate AI capabilities into existing software platforms in a controlled, production-ready manner.

This role has significantly strengthened my expertise in:

Enterprise software engineering practices

Production system reliability and observability

AI-aware system thinking and automation readiness

Collaboration across development, operations, and business teams

HCLTechbee Intern

January 2024 - June 2024 (6 months)

Madurai, Tamil Nadu, India

Completed a structured internship focused on core software engineering fundamentals and enterprise application support, gaining hands-on exposure to real-world development and production environments.

During this internship, I assisted in debugging, enhancing, and maintaining existing codebases, developing a strong foundation in programming logic, database interactions, and system-level problem solving. I worked closely with senior engineers to understand application workflows, data flow across systems, and quality-driven development practices.

I gained practical experience using NetBeans IDE, implementing JDBC-based database connectivity, and working with SQL, PL/SQL, Oracle Database, and Unix-based systems. This role strengthened my understanding of backend application behavior, data consistency, and execution reliability in enterprise settings.

The internship provided valuable exposure to:

Enterprise software development lifecycles

Debugging and root-cause analysis

Database-driven application logic

Team-based development and delivery standards

This experience laid a strong technical foundation and directly supported my transition into a full-time Software Engineer role at HCLTech.

HCLTechbee Scholar

June 2023 - December 2023 (7 months)

Madurai, Tamil Nadu, India

Completed a rigorous, industry-aligned apprenticeship program focused on core software engineering principles, with structured training in Java programming, database management, and system fundamentals.

The program combined theoretical instruction with hands-on application, where I worked on small-scale projects and practical exercises to strengthen my understanding of:

Algorithm design and problem-solving

Relational databases and DBMS concepts

PL/SQL and JDBC-based database connectivity

Unix-based environments

Computer Organization and system-level fundamentals

Through this apprenticeship, I developed a strong grounding in backend logic, data handling, and structured programming practices, forming a solid technical base that directly supported my transition into enterprise software roles at HCLTech.

This experience played a key role in shaping my engineering mindset, emphasizing clarity, correctness, and scalability—principles that continue to influence my approach to building reliable, production-ready software systems.

Freelance

Web Designer and Developer

December 2021 - Present (4 years 10 months)

Independent web professional delivering end-to-end website design and development solutions for businesses, startups, and individual clients across multiple domains.

I design and build responsive, performance-optimized websites using WordPress and modern CMS platforms, focusing on clean UI/UX, scalability, and maintainability. My work involves translating business requirements into functional digital products, configuring custom themes and components, and ensuring cross-device compatibility.

In addition to development, I provide ongoing support, performance tuning, security hardening, and content optimization, enabling clients to maintain stable and secure web platforms. I also implement SEO-friendly structures and best practices to improve visibility and user engagement.

This role has strengthened my ability to:

Own the full software delivery lifecycle

Work directly with stakeholders and end users

Apply version control (Git/GitHub) and structured workflows

Balance technical quality with real-world constraints

Over time, this freelance experience has helped me build a diverse portfolio, sharpen my problem-solving skills, and develop a strong sense of product thinking and client-centric delivery, which I now apply to larger-scale and AI-enabled software systems.

Xbean international

Junior Web Developer

August 2022 - December 2022 (5 months)

Worked as a Junior Web Developer supporting the design, development, and maintenance of client-facing web applications under the guidance of senior developers.

I contributed to the implementation of new features, enhancement of existing functionality, and deployment of WordPress-based websites tailored to client requirements. This included working on responsive layouts, content structures,

and performance improvements to deliver reliable and user-friendly web solutions.

Through close collaboration with experienced developers, I gained hands-on exposure to:

End-to-end web development workflows

Version control using Git and GitHub

CMS-driven application design

SEO-friendly website structures

Frontend styling using Bootstrap

This role strengthened my understanding of software collaboration, code quality, and production readiness, and served as an important stepping stone toward more complex, system-oriented engineering roles.

Education

Indian Institute of Technology, Guwahati

Bachelor of Science (Honours) in Data Science & Artificial Intelligence, Artificial Intelligence and Data Science · (September 2024 - August 2028)

ST JOSEPH'S HSS VAYATTUPARAMBA

Plus Two, Computer Science · (June 2021 - March 2023)

ST JOSEPH'S HSS VAYATTUPARAMBA

10 th, SSLC · (June 2018 - March 2021)
